Consumer Protection in the Context of Microfinance Research

There is a clear role for lawyers to engage in development activities by assisting the poor to access information about their legal rights, thereby facilitating *Access to Knowledge*. Lawyers can also directly provide legal aid as well as advocate for the improved protection of consumer rights. Thus, the BA A2K

project is Collaborating with the International Development Law Organization to explore the expansion of the A2K panorama. Together, BA and IDLO are researching the *de jure* and *de facto* existence of consumer protection principles in the Egyptian legal and regulatory framework and micro-finance industry,

particularly with regard to the provision of financial services to the poor. Ultimately, this research will be done in five countries and will end with recommendations as to how to improve protections for the poor.

"Share your knowledge. It's a way to achieve immortality."

BA A2K Toolkit I has been updated with:

The GNU Free Documentation License

By Anas Tawileh

The adoption of the GNU General Public License (GPL) did not face any significant difficulties. Despite all the challenges it posed to proprietary software development companies, and the vested interests of so many players, the GPL was incredibly successful in attracting large numbers of software developers to write and contribute high quality software. This can be partly attributed to the characteristics of the software development process, in which several developers collaborate to write small chunks of code, in addition to the ethos of software developers who tend to favor tinkering around with source code to learn how it works, and then work on improving it.

Open Access & the Divide Between “Mainstream” & “Peripheral” Science

By Jean-Claude Guédon

“Neither the “centre”, nor the “periphery” is monolithic and, on at least some issues, they display points of convergence. Open Access to the scientific literature is a good example of such a possible convergence: most scientists everywhere can agree that it will improve their ability to work and to contribute to the evolution of science. But they may have different arguments to support this viewpoint.”

Ph. D. in history of Science (University of Wisconsin-Madison, 1974) and Professor at the University of Montreal, **Jean-Claude Guédon** must have been among the very first users of the Net in the humanities as he began to explore the Internet ca. 1988. Through his understanding of the power of the Net, he designed and launched an electronic scholarly journal in the humanities in 1991 (Surfaces) and this is the oldest extant e-journal in Canada.
