

Salah El Din Bin Salah Bin Hassan: Study and Verification

Ibrahim Ahmed Mohamed Motawe'a

The research is a scientific study of Salah El Din Bin Salah Bin Hassan's tombstone, which is made of limestone—is in a poor condition of reservation—and dates back approximately to 911 Hijra. The tombstone is located in the southern cemetery, next to the southern entrance of the Mausoleum's door of Imam Naser Din Allah Ahmed Bin El Imam El Mahdy in Yemen. The research begins by the historical background and material description of this tombstone, facsimile of the text accompanied by analytical study (linguistically and calligraphically).
